# BVE³ Energy and Water Module
Streamlining Your GHG Reporting

Challenges

While reporting water and energy consumption in supply chains has primarily been voluntary, a few regulatory initiatives are beginning to emerge. Accurate and reliable data is crucial for informed decision-making. However, ensuring the accuracy and trustworthiness of supply chain emissions data presents a significant challenge.

BVE³ offers a comprehensive digital solution for chemical and environmental data management. Our latest addition, the **Energy and Water Module, is designed to enhance efficiency in energy and water data collection within your supply chain.** BVE³ generates professional technical reports with reliable data, helping users identify potential risks and streamlining GHG reporting in the future.

50+ Brands have partnered with BVE³	**2000+** Suppliers have subscribed for BVE³
125K+ # of chemical formulations reviewed	**35+** Countries in major continents

As an add-on service, our on-site energy, water, and waste assessment helps verify data on energy usage, water consumption, wastewater discharge, air emissions, material usage, chemical usage, chemical waste, and more. The assessment evaluates environmental impacts and provides practical and achievable suggestions for facility improvement.

Key Features:

- Standardize and streamline your factories' Water & Energy data collection

- Real-time data submission status and information tracking towards total transparency to data disclosure

- Identify any process and trends through various real-time dashboards. Review and evaluate supply chain's performance
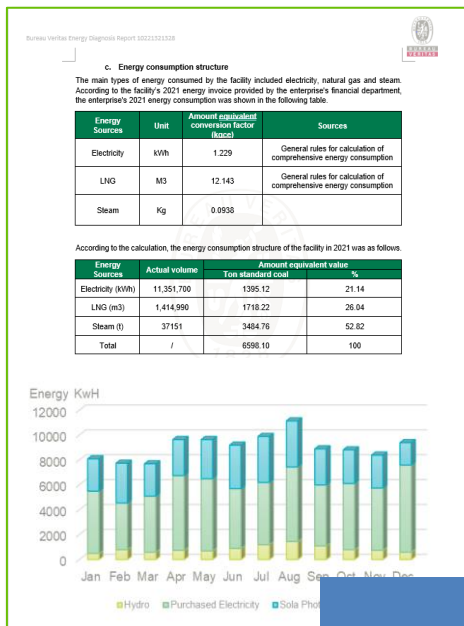

- Professional technical reports with reliable data and actionable improvement suggestions

- Fulfil regulatory requirements e.g. Corporate Sustainability Reporting Directive (CSRD)

- Enhance trust level of data to environmental assessment e.g. Higg FEM 4.0
